You should always be aware of where your personal data is being stored and respond appropriately to any notifications of a data breach. If you still don't have a vulnerability disclosure policy on your website, you can learn more about it in one of our previous blog [posts](#). Also, it is also recommended to follow these simple cyber hygiene rules and to make sure you're generally protected:

- try to constantly update your passwords to online accounts (such as email)
- try not to use the same password for multiple accounts
- we also recommend to create and use a separate email alias for any marketing sales or promotion deals and to limit public sharing of your personal details
