HACKEN

SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

Customer: DeFly Ball
Date: December 10th, 2021

Document

Name	Smart Contract Code Review and Security Analysis Report for DeFly Ball.
Approved by	Andrew Matiukhin | CTO Hacken OU
Type	ERC20 token; Transfer controller
Platform	Ethereum / Solidity
Methods	Architecture Review, Functional Testing, Computer-Aided Verification, Manual Review
File	Token.sol
Deployed Contract	https://bscscan.com/address/0x0FE6A599C280853621A11C12e1a68E6949CbD08A
Technical Documentation	NO
JS tests	NO
Website	Deflyball.com
Timeline	9 DECEMBER 2021 - 10 DECEMBER 2021
Changelog	10 DECEMBER 2021 — INITIAL AUDIT

Table of contents

Introduction

Hacken OÜ (Consultant) was contracted by DeFly Ball (Customer) to conduct a Smart Contract Code Review and Security Analysis. This report presents the findings of the security assessment of the Customer's smart contract and its code review conducted between December 9th, 2021- December 10th, 2021.

Scope

The scope of the project is smart contracts in the file:
File: Token.sol
Deployed Contract:
https://bscscan.com/address/0x0FE6A599C280853621A11C12e1a68E6949CbD08A#code
Technical Documentation: No
**JS tests:** No
Contracts:
　　Token.sol

We have scanned this smart contract for commonly known and more specific vulnerabilities. Here are some of the commonly known vulnerabilities that are considered:

Category	Check Item
Code review	▪ Reentrancy
	▪ Ownership Takeover
	▪ Timestamp Dependence
	▪ Gas Limit and Loops
	▪ DoS with (Unexpected) Throw
	▪ DoS with Block Gas Limit
	▪ Transaction-Ordering Dependence
	▪ Style guide violation
	▪ Costly Loop
	▪ ERC20 API violation
	▪ Unchecked external call
	▪ Unchecked math
	▪ Unsafe type inference
	▪ Implicit visibility level
	▪ Deployment Consistency
	▪ Repository Consistency
	▪ Data Consistency

Functional review	
	▪ Business Logics Review
	▪ Functionality Checks
	▪ Access Control & Authorization
	▪ Escrow manipulation
	▪ Token Supply manipulation
	▪ Assets integrity
	▪ User Balances manipulation
	▪ Data Consistency manipulation
	▪ Kill-Switch Mechanism
	▪ Operation Trails & Event Generation

Executive Summary

According to the assessment, the Customer's smart contracts are secured.

| Insecure	Poor secured	Secured	Well-secured

You are here
Our team performed an analysis of code functionality, manual audit, and automated checks with Mythril and Slither. All issues found during automated analysis were manually reviewed, and important vulnerabilities are presented in the Audit overview section. All found issues can be found in the Audit overview section.

As a result of the audit, security engineers found **1** medium severity issue.

Notice:

The LiquidityRestrictor and Antisnipe contracts have the ability to block the transfer of tokens. These contracts are not in the audit's scope. Our team cannot guarantee the security of these contracts.

Graph 1. The distribution of vulnerabilities after the audit.

Medium
100,0%
Severity Definitions

Risk Level	Description
Critical	Critical vulnerabilities are usually straightforward to exploit and can lead to assets loss or data manipulations.
High	High-level vulnerabilities are difficult to exploit; however, they also have a significant impact on smart contract execution, e.g., public access to crucial functions
Medium	Medium-level vulnerabilities are important to fix; however, they can't lead to assets loss or data manipulations.
Low	Low-level vulnerabilities are mostly related to outdated, unused, etc. code snippets that can't have a significant impact on execution

Audit overview

■ ■ ■ ■ Critical

No critical issues were found.

■ ■ ■ High

No high severity issues were found.

■ ■ Medium

The Pausable contact is imported but does not affect the token contract.

Contracts: Token.sol

Recommendation: remove unused code.

■ Low

No low severity issues were found.

Conclusion

Smart contracts within the scope were manually reviewed and analyzed with static analysis tools.

The audit report contains all found security vulnerabilities and other issues in the reviewed code.

As a result of the audit, security engineers found **1** medium severity issue.

Notice:

The LiquidityRestrictor and Antisnipe contracts have the ability to block the transfer of tokens. These contracts are not in the audit's scope. Our team cannot guarantee the security of these contracts.

Disclaimers

Hacken Disclaimer

The smart contracts given for audit have been analyzed in accordance with the best industry practices at the date of this report, in relation to cybersecurity vulnerabilities and issues in smart contract source code, the details of which are disclosed in this report (Source Code); the Source Code compilation, deployment, and functionality (performing the intended functions).

The audit makes no statements or warranties on the security of the code. It also cannot be considered as a sufficient assessment regarding the utility and safety of the code, bug-free status, or any other statements of the contract. While we have done our best in conducting the analysis and producing this report, it is important to note that you should not rely on this report only — we recommend proceeding with several independent audits and a public bug bounty program to ensure the security of smart contracts.

Technical Disclaimer

Smart contracts are deployed and executed on a blockchain platform. The platform, its programming language, and other software related to the smart contract can have vulnerabilities that can lead to hacks. Thus, the audit can't guarantee the explicit security of the audited smart contracts.
