

**HACKEN**

# SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

Customer: Oobit  
Date: April 19, 2023

HACKEN

Hacken OÜ  
Parda 4, Kesklinn, Tallinn,  
10151 Harju Maakond, Eesti,  
Kesklinna, Estonia  
support@hacken.io

This report may contain confidential information about IT systems and the intellectual property of the Customer, as well as information about potential vulnerabilities and methods of their exploitation.

The report can be disclosed publicly after prior consent by another Party. Any subsequent publication of this report shall be without mandatory consent.

## Document

<b>Name</b>	Smart Contract Code Review and Security Analysis Report for Oobit
<b>Approved By</b>	Paul Fomichov   SC Audits Head at Hacken OU
<b>Type</b>	ERC20 token
<b>Platform</b>	EVM
<b>Language</b>	Solidity
<b>Methodology</b>	<a href="#">Link</a>
<b>Website</b>	<a href="https://www.oobit.com/">https://www.oobit.com/</a>
<b>Changelog</b>	27.03.2023 - Initial Review 19.04.2023 - Second Review

## Table of contents

<b>Introduction</b>	<b>4</b>
<b>Scope</b>	<b>4</b>
<b>Severity Definitions</b>	<b>5</b>
<b>Executive Summary</b>	<b>6</b>
<b>Risks</b>	<b>6</b>
<b>System Overview</b>	<b>7</b>
<b>Checked Items</b>	<b>8</b>
<b>Findings</b>	<b>11</b>
Critical	11
High	11

## Introduction

Hacken OÜ (Consultant) was contracted by Oobit (Customer) to conduct a Smart Contract Code Review and Security Analysis. This report presents the findings of the security assessment of the Customer's smart contracts.

## Scope

The scope of the project includes the following smart contracts from the provided repository:

### Initial review scope

<b>Repository</b>	<a href="https://etherscan.io/token/0x07f9702ce093db82dfdc92c2c6e578d6ea8d5e22#code">https://etherscan.io/token/0x07f9702ce093db82dfdc92c2c6e578d6ea8d5e22#code</a>
<b>Commit</b>	-
<b>Whitepaper</b>	-
<b>Functional Requirements</b>	<a href="https://www.oobit.com/obt">https://www.oobit.com/obt</a>
<b>Technical Requirements</b>	-
<b>Contracts</b>	File: ../contracts/FixedSupplyBasicERC20Token.sol SHA3: 2ca5d05c2b600b348117545ecea8705a6447a82522fc518ab213e86969943262

### Second review scope

<b>Repository</b>	<a href="https://etherscan.io/token/0x07f9702ce093db82dfdc92c2c6e578d6ea8d5e22#code">https://etherscan.io/token/0x07f9702ce093db82dfdc92c2c6e578d6ea8d5e22#code</a>
<b>Commit</b>	-
<b>Whitepaper</b>	-
<b>Functional Requirements</b>	<a href="https://www.oobit.com/obt">https://www.oobit.com/obt</a>
<b>Technical Requirements</b>	-
<b>Contracts</b>	File: ../contracts/FixedSupplyBasicERC20Token.sol SHA3: 2ca5d05c2b600b348117545ecea8705a6447a82522fc518ab213e86969943262

## Severity Definitions

Risk Level	Description
<b>Critical</b>	Critical vulnerabilities are usually straightforward to exploit and can lead to the loss of user funds or contract state manipulation by external or internal actors.
<b>High</b>	High vulnerabilities are usually harder to exploit, requiring specific conditions, or have a more limited scope, but can still lead to the loss of user funds or contract state manipulation by external or internal actors.
<b>Medium</b>	Medium vulnerabilities are usually limited to state manipulations but cannot lead to asset loss. Major deviations from best practices are also in this category.
<b>Low</b>	Low vulnerabilities are related to outdated and unused code or minor Gas optimization. These issues won't have a significant impact on code execution but affect code quality

## Executive Summary

The score measurement details can be found in the corresponding section of the [scoring methodology](#).

### Documentation quality

The total Documentation Quality score is **8** out of **10**.

- NatSpec is sufficient.
- Technical specification is provided.
- Run instructions are not provided.
- The architectural design overview is missing.

### Code quality

The total Code Quality score is **5** out of **10**.

- Development environment is not configured.
- Outdated Solidity version.
- Solidity Style Guide violations.

### Test coverage

Code coverage of the project is **0%** (branch coverage).

- Missing tests

### Security score

As a result of the audit, the code contains **1** medium and **4** low severity issues. The security score is **9** out of **10**.

All found issues are displayed in the “Findings” section.

### Summary

According to the assessment, the Customer's smart contract has the following score: **8.1**. The system users should acknowledge all the risks summed up in the risks section of the report.

*Table. The distribution of issues during the audit*

Review date	Low	Medium	High	Critical
19 April 2023	4	1	0	0

## Risks

- Old Solidity compiler.

## System Overview

*FixedSupplyBasicERC20Token* is a simple ERC20 contract. Contract is using the old Solidity version (0.4.24). Contract is deployed on Ethereum mainnet and it has been live since 18.04.2021. Contract is extended by *ERC20Detailed*. There are not any additional functionalities besides basic ERC20 public functions. ERC20 token have following attributes:

- name: Oobit,
- symbol: OBT,
- decimals: 18,
- initial supply: 1\_000\_000\_000

## Privileged roles

- No privileged roles are described in the system.

## Recommendations

- Provide tests to increase test coverage.
- Configure development environment.
- Use template ERC20 contract from OpenZeppelin.
- Provide revert messages to increase user friendliness.

## Checked Items

We have audited the Customers' smart contracts for commonly known and specific vulnerabilities. Here are some items considered:

Item	Type	Description	Status
Default Visibility	<a href="#">SWC-100</a> <a href="#">SWC-108</a>	Functions and state variables visibility should be set explicitly. Visibility levels should be specified consciously.	Passed
Integer Overflow and Underflow	<a href="#">SWC-101</a>	If unchecked math is used, all math operations should be safe from overflows and underflows.	Passed
Outdated Compiler Version	<a href="#">SWC-102</a>	It is recommended to use a recent version of the Solidity compiler.	Failed
Floating Pragma	<a href="#">SWC-103</a>	Contracts should be deployed with the same compiler version and flags that they have been tested thoroughly.	Failed
Unchecked Call Return Value	<a href="#">SWC-104</a>	The return value of a message call should be checked.	Not Relevant
Access Control & Authorization	<a href="#">CWE-284</a>	Ownership takeover should not be possible. All crucial functions should be protected. Users could not affect data that belongs to other users.	Passed
SELFDESTRUCT Instruction	<a href="#">SWC-106</a>	The contract should not be self-destructible while it has funds belonging to users.	Not Relevant
Check-Effect-Interaction	<a href="#">SWC-107</a>	Check-Effect-Interaction pattern should be followed if the code performs ANY external call.	Passed
Assert Violation	<a href="#">SWC-110</a>	Properly functioning code should never reach a failing assert statement.	Passed
Deprecated Solidity Functions	<a href="#">SWC-111</a>	Deprecated built-in functions should never be used.	Passed
Delegatecall to Untrusted Callee	<a href="#">SWC-112</a>	Delegatecalls should only be allowed to trusted addresses.	Not Relevant
DoS (Denial of Service)	<a href="#">SWC-113</a> <a href="#">SWC-128</a>	Execution of the code should never be blocked by a specific contract state unless required.	Passed

<b>Race Conditions</b>	<a href="#">SWC-114</a>	Race Conditions and Transactions Order Dependency should not be possible.	Passed
<b>Authorization through tx.origin</b>	<a href="#">SWC-115</a>	tx.origin should not be used for authorization.	Not Relevant
<b>Block values as a proxy for time</b>	<a href="#">SWC-116</a>	Block numbers should not be used for time calculations.	Not Relevant
<b>Signature Unique Id</b>	<a href="#">SWC-117</a> <a href="#">SWC-121</a> <a href="#">SWC-122</a> <a href="#">EIP-155</a> <a href="#">EIP-712</a>	Signed messages should always have a unique id. A transaction hash should not be used as a unique id. Chain identifiers should always be used. All parameters from the signature should be used in signer recovery. EIP-712 should be followed during a signer verification.	Not Relevant
<b>Shadowing State Variable</b>	<a href="#">SWC-119</a>	State variables should not be shadowed.	Passed
<b>Weak Sources of Randomness</b>	<a href="#">SWC-120</a>	Random values should never be generated from Chain Attributes or be predictable.	Not Relevant
<b>Incorrect Inheritance Order</b>	<a href="#">SWC-125</a>	When inheriting multiple contracts, especially if they have identical functions, a developer should carefully specify inheritance in the correct order.	Passed
<b>Calls Only to Trusted Addresses</b>	<a href="#">EEA-Lev e1-2</a> <a href="#">SWC-126</a>	All external calls should be performed only to trusted addresses.	Not Relevant
<b>Presence of Unused Variables</b>	<a href="#">SWC-131</a>	The code should not contain unused variables if this is not <a href="#">justified</a> by design.	Passed
<b>EIP Standards Violation</b>	<a href="#">EIP</a>	EIP standards should not be violated.	Not Relevant
<b>Assets Integrity</b>	Custom	Funds are protected and cannot be withdrawn without proper permissions or be locked on the contract.	Passed
<b>User Balances Manipulation</b>	Custom	Contract owners or any other third party should not be able to access funds belonging to users.	Passed
<b>Data Consistency</b>	Custom	Smart contract data should be consistent all over the data flow.	Passed

<b>Flashloan Attack</b>	<b>Custom</b>	When working with exchange rates, they should be received from a trusted source and not be vulnerable to short-term rate changes that can be achieved by using flash loans. Oracles should be used.	Not Relevant
<b>Token Supply Manipulation</b>	<b>Custom</b>	Tokens can be minted only according to rules specified in a whitepaper or any other documentation provided by the Customer.	Passed
<b>Gas Limit and Loops</b>	<b>Custom</b>	Transaction execution costs should not depend dramatically on the amount of data stored on the contract. There should not be any cases when execution fails due to the block Gas limit.	Not Relevant
<b>Style Guide Violation</b>	<b>Custom</b>	Style guides and best practices should be followed.	Failed
<b>Requirements Compliance</b>	<b>Custom</b>	The code should be compliant with the requirements provided by the Customer.	Passed
<b>Environment Consistency</b>	<b>Custom</b>	The project should contain a configured development environment with a comprehensive description of how to compile, build and deploy the code.	Failed
<b>Secure Oracles Usage</b>	<b>Custom</b>	The code should have the ability to pause specific data feeds that it relies on. This should be done to protect a contract from compromised oracles.	Not Relevant
<b>Tests Coverage</b>	<b>Custom</b>	The code should be covered with unit tests. Test coverage should be sufficient, with both negative and positive cases covered. Usage of contracts by multiple users should be tested.	Failed
<b>Stable Imports</b>	<b>Custom</b>	The code should not reference draft contracts, which may be changed in the future.	Not Relevant

## Findings

### ■■■■ Critical

No critical severity issues were found.

### ■■■ High

No high severity issues were found.

### ■■ Medium

#### M01. Copy of Well-Known Contracts

The contract contains copies of OZ contracts that can instead be imported.

**Path:** ./contracts/FixedSupplyBasicERC20Token.sol

**Recommendation:** Import templates and libraries instead of copying them. Additionally, to get a clean and sound-looking verification on Etherscan, the Hardhat-Etherscan can be used.

**Status:** New

### ■ Low

#### L01. Style Guide Violation - Naming Conventions

The provided projects should follow the official guidelines. According to the [Solidity Naming Conventions Guidelines](#), constants should be named with all capital letters with underscores separating words.

**Paths:** ./contracts/FixedSupplyBasicERC20Token.sol : \_name,  
./contracts/FixedSupplyBasicERC20Token.sol : \_symbol,  
./contracts/FixedSupplyBasicERC20Token.sol : \_decimals,  
./contracts/FixedSupplyBasicERC20Token.sol : \_fixed\_supply,

**Recommendation:** Follow the official Solidity guidelines.

**Status:** New

#### L02. Outdated Solidity Version

Using an outdated compiler version can be problematic, especially if publicly disclosed bugs and issues affect the current compiler version.

**Path:** ./contracts/FixedSupplyBasicERC20Token.sol

**Recommendation:** Use a contemporary compiler version.

**Status:** New

### L03. SPDX License Identifier not Provided in a Source File

Before publishing, consider adding a comment containing "SPDX-License-Identifier: <SPDX-License>" to each source file. Use "SPDX-License-Identifier: UNLICENSED" for non-open-source code.

**Path:** ./contracts/FixedSupplyBasicERC20Token.sol

**Recommendation:** Add SPDX-license identifiers.

**Status:** New

### L04. No Messages in Require Conditions

The require condition can be used to check for conditions and throw an exception if the condition is not met. It is possible to provide a message string for require. If a string argument to require is not provided, it will revert with empty error data, not even including the error selector.

**Path:** ./contracts/FixedSupplyBasicERC20Token.sol

**Recommendation:** Add error messages to require conditions.

**Status:** New

## Disclaimers

### Hacken Disclaimer

The smart contracts given for audit have been analyzed based on best industry practices at the time of the writing of this report, with cybersecurity vulnerabilities and issues in smart contract source code, the details of which are disclosed in this report (Source Code); the Source Code compilation, deployment, and functionality (performing the intended functions).

The report contains no statements or warranties on the identification of all vulnerabilities and security of the code. The report covers the code submitted and reviewed, so it may not be relevant after any modifications. Do not consider this report as a final and sufficient assessment regarding the utility and safety of the code, bug-free status, or any other contract statements.

While we have done our best in conducting the analysis and producing this report, it is important to note that you should not rely on this report only – we recommend proceeding with several independent audits and a public bug bounty program to ensure the security of smart contracts.

English is the original language of the report. The Consultant is not responsible for the correctness of the translated versions.

### Technical Disclaimer

Smart contracts are deployed and executed on a blockchain platform. The platform, its programming language, and other software related to the smart contract can have vulnerabilities that can lead to hacks. Thus, the Consultant cannot guarantee the explicit security of the audited smart contracts.
